DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-9 and 12-15, as the claims relate to SEQ ID NO: 2, drawn to methods of modulating the activity of a rat L-TRP protein and for identifying modulators of said protein, classified in class 435, subclass 7.21.
- II. Claims 1-9 and 12-15, as the claims relate to SEQ ID NO: 5, drawn to methods of modulating the activity of a murine LTRP5 protein and for identifying modulators of said protein, classified in class 435, subclass 7.21.
- III. Claims 1-9 and 12-15, as the claims relate to SEQ ID NO: 8, drawn to methods of modulating the activity of a human LTRP5 protein and for identifying modulators of said protein, classified in class 435, subclass 7.21
- IV. Claims 10 and 11, as the claims relate to SEQ ID NO: 2, drawn to methods of identifying binding partners of a rat L-TRP protein, classified in class 436, subclass 501.
- V. Claims 10 and 11, as the claims relate to SEQ ID NO: 5, drawn to methods of identifying binding partners of a murine LTRP5 protein, classified in class 436, subclass 501.

- VI. Claims 10 and 11, as the claims relate to SEQ ID NO: 5, drawn to methods of identifying binding partners of a human LTRP5 protein, classified in class 436, subclass 501.

The inventions are distinct, each from the other because of the following reasons:

Although there are no provisions under the section for "Relationship of Inventions" in M.P.E.P. § 806.05 for inventive groups that are directed to different methods, restriction is deemed to be proper because these methods appear to constitute patentably distinct inventions for the following reasons: The methods of Groups I-III are distinct both physically and functionally from the methods of Groups IV-VI, and are not required one for the other. Groups I-III require an assay for activity which is not required by any of the other Groups IV-VI. Conversely, Groups IV-VI require an assay of binding, which is not required by any of the other Groups I-III. The methods of each of Groups I and IV require a rat protein, which is not required by any of the other groups. The methods of each of Groups II and V require a murine protein, which is not required by any of the other groups. The methods of each of Groups III and VI require a human protein, which is not required by any of the other groups.

Therefore, because these inventions are distinct for the reasons given above and because a search and examination of all the groups in one patent application would result in an undue burden, since the searches for the groups are not co-extensive, the classification is different, and the subject matter is divergent, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143). Applicant is reminded that upon the cancellation of claims to a non-elected invention,

Art Unit: 1646

the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
